

What is claimed is:

1. A mixer for a capsule for dental restoration material for mixing a powder component and a liquid component of a dental restoration material by shaking within a mixing compartment of a capsule for dental restoration material having an air-permeable filter, which can ventilate air within the mixing compartment into the outside of the mixing compartment, placed as an outer wall constituting at least a part of a peripheral wall of the mixing compartment, wherein the mixer is provided with a capsule holding chamber for holding the capsule for dental restoration material in a portion other than a portion corresponding to the air-permeable filter, and the capsule holding chamber is connected to a vacuum device.
2. The mixer for a capsule for dental restoration material as claimed in claim 1, wherein the vacuum device is an ejector connected to a compressed air supply device for a dental unit.
